

Exercise 1 – Writing expressions in readable form

Write given mathematical expressions in the text form as per the example below (Assume suitable names for the operator functions):

Example:

$$\frac{a}{b} + \sqrt[3]{a + b}.$$

Form 1 (With operators):

```
let x = (a / b)
let y = sqrt_3(a + b)
```

Form 2 (With functions):

```
let x = divide(a, b)
let y = add(a, b)
let z = sqrt_3(y)
let answer = x + z
```

Form 3 (With functions, in one line):

```
divide(a, b) + sqrt_3(add(a,b))
```

Question 1:

$$\frac{(a + b)^4}{1 - \sqrt{c \times d}}$$

Question 2:

$$(a \times b \div (c + (d^2 - e^2)) + f)$$

Question 3:

$$\int_0^n (a + b)^4 \div \sum_0^n (c + 1)$$

Use following functions:

$\int_0^n$ integration => integration(from, to, expression)

$\sum_0^n$ summation => summation(from, to, expression)
